Gist of the Lectures given by the Resource Persons:

Dr. Jayanta Ghosh, Assistant Professor, WBNUJS

Topic: "Accessibility and Utility of IP for a Sustainable Society"

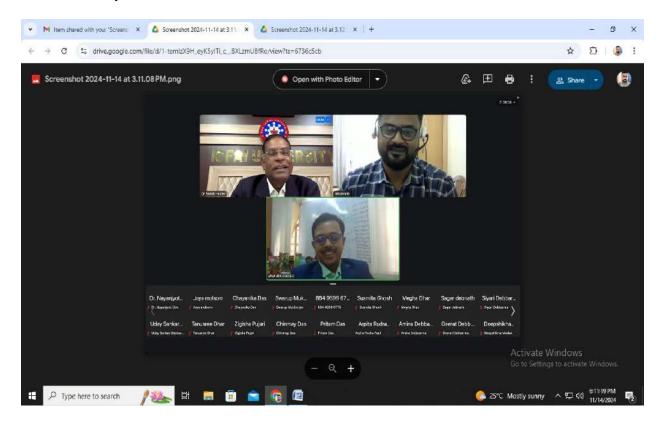

From a broad sustainable development viewpoint, intellectual property (IP) might relate to a number of aspects of a country's social and economic development. Its impact can be felt in industrial, health, education, nutrition, biodiversity and cultural policies. In exploring the issues relating to sustainable development and the important changes that have taken place in the IP landscape, we will focus on issues that are drawing particular attention in major international for and to developments that are taking place in bilateral trade negotiations.

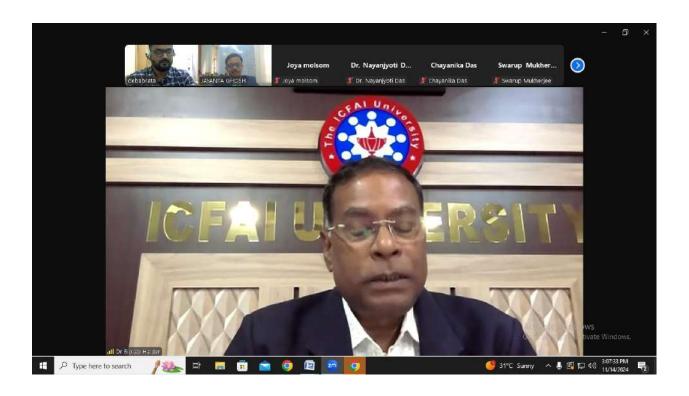

Intellectual property rights are conceived as a tool to reward innovators and creators for their contributions to society, for a statutory period of time. They are intended to provide the necessary incentives for the generation and dissemination of knowledge as well as to encourage the transfer of technology. They cover a wide range of interrelated disciplines.

The legal rules covering these disciplines tend to be complex and their economic, social and environmental impact is diverse and often difficult to measure. The extent to which these rules advance public policy objectives depends, to a great extent, on how international obligations are implemented, and this is particularly the case with respect to the attainment of sustainable development goals. One of the purposes of this paper is precisely to consider the main features of the international IP architecture and its relationship with sustainable development as it concerns access to knowledge, access to health and biodiversity.

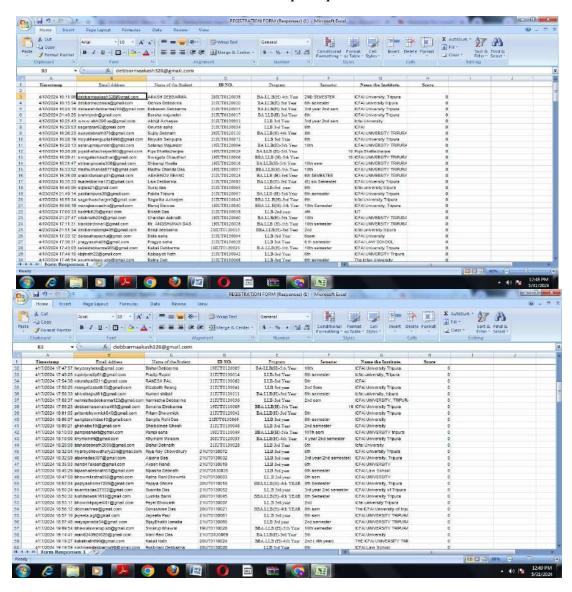

CERTIFICATE OF APPRECIATION FOR RESOURCE PERSONS:

<u>Students Participation:</u> Total 150 Students have participated the Event.

THANK YOU
